

Nordic Address Forum 2009

Land Report - Sweden

LANTMÄTERIET

Main activities 2009

- The building of the dwelling register continues
- Intensified quality improvement activities for addresses
- More focus on demands of the "Blue Light Authorities" (Ambulance, Fire Brigade, Police etc.)
- Buildings, Addresses and Dwellings the first objects to be migrated into a new technical environment (Elips program)

Some statistics

Registered Buildings	3 275 247
Possible number of Buildings with dwellings	2 780 317
- still without addresses	123 983
Address coverage	95,5 %

Updated June 2, 2009

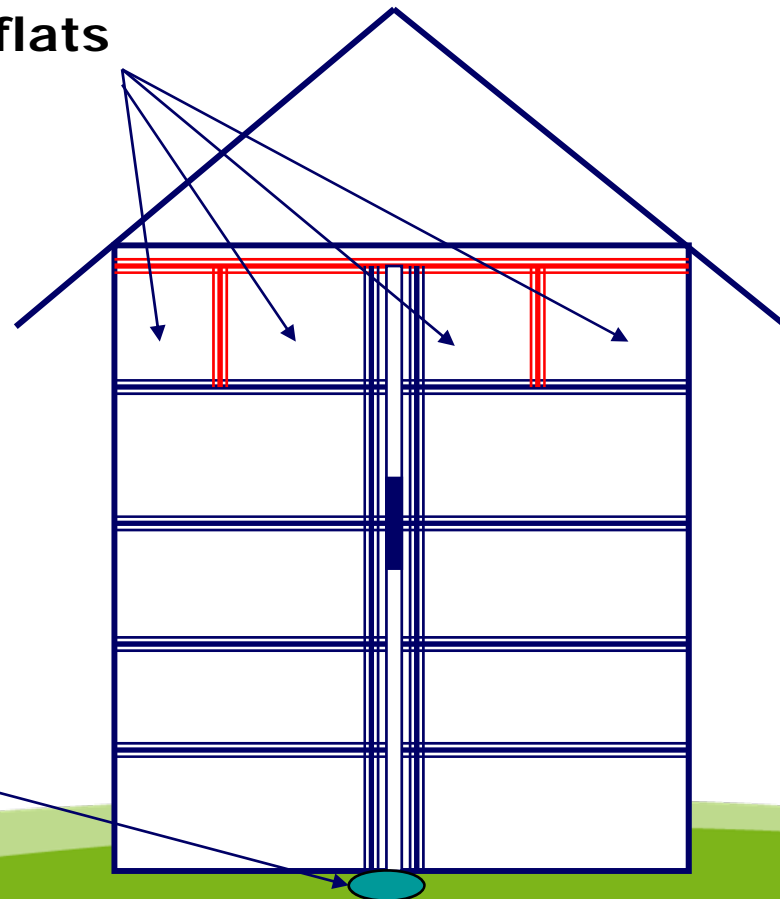

New type of ownership introduced 2009: *Owner flats or Condominiums*

At least three flats

Every flat will be a separate
3D - Real Property Unit

But: The flat will not be
registered as a separate
building with its own
geometry but linked to
the building it belongs to

The locational address for
all flats will be the entrance
address

LANTMÄTERIET

Goals for the main quality improvement activities for Addresses

- Complete all addresses with **coordinates**
- All addresses with entrance coordinates should have **links to the building objects**
- Every active address in a building with more than one entrance should have **unique coordinates**

Blue Light Authorities

- A variety of information is needed – addresses, buildings, geographical names, "points of Interest", maps
- Lantmäteriet, with the support of the municipalities, can supply base information
- Other sources are needed for more frequently changed information (restaurants, discoteques etc)
- An external supplier will build the application

What's still missing?

- Very often a person in an emergency situation doesn't know the address. Popular names of buildings are needed. Today a number of buildings in our register lack names.
- Addresses are not always registered in an early stage of house construction (Accidents are not unusual on building sites).
- There are still areas where addresses are missing, for example summer house areas.

More emphasis on the above issues in our discussions with the municipalities. Our cooperation agreement is to be renegotiated 2010.

The change program (Elips) will:

- Change the way we exchange information with our stakeholders
- Change the way we organize and work internally
- Change our technical environment
- Integrate geographic and textual attributes
